

HOW TO TAKE A SPACE SELFIE

USING THE SPYMESAT MOBILE APP

GET THE APP

Download the free SpyMeSat mobile app for Apple or Android. When you open the app it defaults to your current location. You can select a new location by press-and-holding on the map or by entering coordinates or an address in the search bar.

STEP
01

PICK YOUR SATELLITE

Once you've centered your location go to the imagery menu and select "New Tasking." You'll then be directed to choose a satellite. Satellites vary in resolution and capabilities. You'll then be given a list of predicted dates and times. Choose the one that works best for your group. Click "Task Satellite" to finalize your tasking order. *Pro Tip: There are educational discounts for tasking.*

STEP
02

GET READY

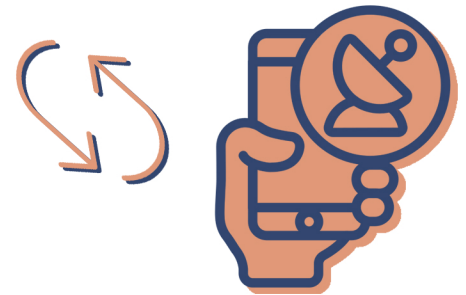

Keep an eye on the weather for the day of your selfie. If it's cloudy or raining you might not get your picture that day due to cloud cover. Don't worry, we'll keep re-tasking until you get your shot! Organize matching colored attire, create a giant banner, gather your group to stand in a large formation. *Pro Tip: Contrasting colors stand out best and watch out for shadows!*

STEP
03

SAY CHEESE

It's the day of your space selfie and the weather looks great! SpyMeSat will notify you that your image is about to be taken and count down the time for you. Get in formation! Spread your banner out! Get ready to wave to the satellite (it can see you even though you can't see it!)

STEP
04

STEP
05

ENJOY YOUR PHOTO

You'll receive your image within a few days via an emailed link. Post it on social media. Print it out and hang it up. Give copies to everyone in the group. Put your logo on it. Brag to your friends that you took a selfie FROM SPACE!
